Amber-Backup   OVERVIEW

How good are your disaster recovery plans? Your **on-line** cloud Ambersoft application contains months or years of information on timesheets, invoices and jobs. The data is contained in a **single file**. This file is located in the cloud on our hosted server and backed up daily.
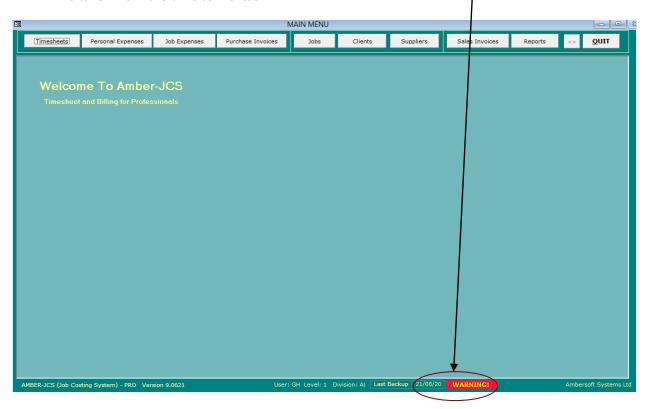

What Amber-Backup can offer is extra peace-of-mind by giving you possession of your back-ups - your own copy at your own location. Each day it automatically downloads a copy of your Amber data file to your own server , desktop or laptop, and displays the last backup date on the main menu of your application (with a red warning message if it is overdue)

Key Features

- **Download.** A copy of your data file is downloaded from our cloud server to your own server, once a day
- **Checks and Displays.** A 'Last Backup Date' is displayed in the Main Menu of your Amber application. A Warning message is displayed in red if it is over a specified age (E.g. 2 days). The date is taken from the off-site file itself.

Benefits

- Multiple Copies. We apply the grandfather-father-son principle, as you may need to go back to an older back-up
- Possession of your own backup
- Automated
- **Simple to Check**, with an overdue warning.
- Robust. The 'Last Backup Date' is taken from the newest file in the backup area

Pricing. The monthly fee starts from £27.50 per month. This fee includes license, hosting and support.
